Evening Brief

Date/Time Stamp: **Wednesday, June 21, 2017 - 10:01 PM**

Weather Summary

Near Record Heat Through Midweek With Lightning and Wind Returning...

Temperatures will reach or exceed record values across the southern two thirds of the Great Basin causing fuels to continue to dry quickly.

After an active day of thunderstorms yesterday, thunderstorms will again develop across the northern half of Nevada, and extend further east today into northern and central UT, with some storms in southeast ID. Storms will be a mix of wet/dry and will be moving eastward a little faster over northern NV/UT/ID than over central NV/UT.

On Wednesday, the ridge will flatten out a bit, pushing the extreme heat to the southern third of the Great Basin and will allow drier air to move into the northern portion of the area. With drier air moving into the north, thunderstorms will develop slightly further south across the area.

Preparedness Levels

Great Basin
Coordination Center

Resources:

- Crews; 22 T1 IHCs in GB, 15 committed, 2 available, 5 R&R.
- T2 IMT Team 4 – Roide – Committed to Brian head fire.
- Local IA resources are at drawdown for UT and NV.
- GBCC has 4 loads of Smokejumpers available in McCall, Elko and Cedar City.
- T1 helicopters and T2 helicopters are all committed.
- 8 T3 helicopters available for IA

Great Basin Fire Potential Summary

Fire danger has been on the increase over the past several days as hot, dry weather is moving into the region.

The potential for new large fires remains high for lower elevations where grasses have cured and fuel loading is high.

For more detail, see [Great Basin 7-Day Fire Potential Outlook](#)
